CAREER OBJECTIVE:

Motivated BTech student passionate about technology, seeking a challenging role to leverage technical skills and drive organizational growth.

Education:

Bachelor of Technology, ECE	[2022 - 2025]
Annamacharya Institute of Technology and Sciences.	CGPA: 7.94
Diploma ECE	[2019 – 2022]
Dr Yc James Yen Govt.Polytechnic (Kuppam)	CGPA: 8.95
SSC	[2019]
AP Model School.	CGPA: 9.2

TECHNICAL SUMMARY:

- Good knowledge of Core Java concepts, including **Classes, Objects, Inheritance, and Polymorphism**.
- Proficient in **Exception Handling** in Java.
- Proficient in implementing **loops, such as for, while, and enhanced for loops**, for efficient code execution.
- Good knowledge on **SQL Database programming in MY_SQL**.
- Good knowledge on SQL Queries for **DDL, DML, TCL, DQL** Operations.
- Impressive in **Tables, Subqueries** and Joins.
- Good understanding of Java Collections Framework, including List, Set, Map, and Queue interfaces.
- Ability to work with collection implementations such as ArrayList, HashSet, HashMap, and LinkedList for efficient data handling.

PROJECTS:

TITLE: FraudShield – Insurance Fraud Detection & Investigation System.

TECHNOLOGIES USED: JAVA, Spring Boot, Angular, HTML, CSS, MySQL.

DESCRIPTION:

The FraudShield system is designed to detect and prevent fraudulent activities in insurance claims by using rule-based checks and pattern analysis to identify suspicious behavior. It supports multiple insurance domains such as health, life, and motor, while ensuring claim data is validated, preprocessed, and normalized for accurate analysis. The fraud detection engine applies predefined rules to flag anomalies, and the risk-scoring module helps investigators focus on high-risk cases. An integrated case management workflow streamlines investigation processes, and advanced analytics dashboards provide insights that enhance compliance, reduce false payouts, and improve overall operational efficiency.

TITLE: Light Sensors (Mini Project).

DESCRIPTION:

Developed a prototype using basic electronics components. Light sensors are a type of photodetector (also called photosensors) that detect light. Different types of light sensors can be used to measure illuminance, respond to changes in the amount of light received, or convert light to electricity.

TECHNICAL SKILLS:

- Languages: Java, MySql.
- Frameworks: Spring Boot, Angular.
- Developer Tools: Vs Code, Eclipse, Tomcat.

CERTIFICATIONS:

- Certified in Python programming through HackerRank.
- Certified in JAVA through HackerRank.

DECLARATION:

I hereby declare that the details and information given above are accurate to the best of my knowledge.
